Job Description

Damage Assessor

Must have 10 years utility distribution experience and capable of performing the following tasks:

1. Identify the difference between electrical lines and telecommunication lines.
2. Identify Overhead and Underground electrical facilities including primary and secondary wire, service wire, pole mounted transformers, fuses, gang switches, reclosers, regulators, padmount transformers, padmount switch gear, etc.
3. Identify all distribution electrical repairs required for restoration.
4. Read and understand a distribution circuit map and label where facilities are in need of repair.
5. Complete client specific damage report.
6. Identify the difference between customer owned facilities and utility facilities.
7. Prepare a construction sketch complete with a materialist for a line crew to utilize to restore damaged facilities.
8. Available to work the daily hours required by the client utility until completion of the restoration process or until released.
9. Identify the difference between customer owned facilities and utility owned facilities
10. Utilize binoculars, cell phone, and/or client radio as necessary.
11. Wear proper personal protective equipment at all times while engaged in the restoration process.

12. Possess a valid driver's license.
13. Field time 95%
14. Travel Required

This position is for casual employment only. A casual employee is one that is assigned to work on an intermittent and/or unpredictable basis.
